| 00101 | Toitū Te Whenua, Land Information New Zealand | 00101.044 | LF – Land and freshwater | LF – LS – P19 | Not stated/unclear | The classification of highly productive land should reflect a nationally recognised system, the Land Use Capacity, LUC classification system. This can be used alongside those other factors that make land highly productive (as listed) as well as access to transport routes, access to appropriate labour markets and the current or potential availability of water, to make a final determination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 00115 | Oceana Gold (New Zealand) Ltd                                      | 00115.017 | LF – Land and freshwater | LF – LS – P19 | Amend | <p>Amend this policy and/or insert new objectives and policies (preferable option) to specifically recognise the significance of mining in the Otago region and specifically the Macraes operation.</p> <p>Proposed policy wording could be based on policy 5.3.4 from the partially operative Otago RPS which says “Recognise the functional needs of mineral exploration, extraction and processing activities to locate where the resource exists.” Further, it needs to be recognised that ‘highly productive land’ means different things for different parts of the primary production sector.</p> <p>Similarly, climate suitability is not an important factor for mining. The policy therefore needs to recognise the land requirements for all primary production activities, not just a subset. For mining, highly productive land is that which holds the region’s best economically recoverable mineral resources, such as that around the Hyde Macraes Shear Zone. For these areas the policy needs to provide that that priority above all other uses of land is given to mining.</p>                                                                                                                                                                   |

| 00511 | PowerNet Ltd                          | 00511.019 | ECO – Ecosystems and indigenous biodiversity | ECO – P6 | Amend | <p>Amend as follows:</p> <p>Be consistent with the national direction such as the Draft NPSIB and NPSFW.</p> <p>AND</p> <p>Amendments to APP3 and APP4 are also necessary.</p> <p>NOTING</p> <p>When this policy is considered alongside the limits or constraints which are set out in APP3 and APP4 as to when offsetting and compensation are available, the policy becomes unworkable in certain circumstances. APP3 and APP4 contain a set of criteria as to when both offsetting and compensation is not an available method. These criteria are limiting and are written as a bottom line or hard limit. If they are not met, the option of offsetting and/or compensation is no longer available to be used as part of any effects management response. In these circumstances, the method directs the decision maker back to the first management tier – which is to “avoid”.</p> <p>The way it draws on APP3 and APP4 is inconsistent with national direction such as the Draft National Policy Statement for Indigenous Biodiversity (“NPSIB”) and NPSFW as to when, and under what circumstances, the full suite of the effects management methods can be applied. It is also inconsistent with section 104(1)(ab) of the RMA which requires a decision maker to have regard to <u>any</u> measure proposed or agreed to by the applicant for the purpose of ensuring positive effects on the environment to offset or compensate for any adverse effects on the environment that will or may result from allowing the activity.</p> |

| 00239 | Federated Farmers of New Zealand                                           | 00239.111 | ECO – Ecosystems and indigenous biodiversity | ECO – E1   | Amend | <p>Amend as follows:</p> <p>The first policy in this chapter outlines how the kaitiaki <u>and stewardship</u> role of Kāi Tahu, <u>landowners and communities</u> will be recognised in Otago. The policies which follow then set out a management regime for identifying significant natural areas <del>and indigenous species and ecosystems that are taoka</del> and protecting them by avoiding particular adverse effects on them.</p> <p>The policies ... established <u>where the ecological integrity of the significant natural area is at risk</u>. To maintain ecosystems and indigenous biodiversity, the policies set out mandatory and sequential steps in an effects management hierarchy to be implemented through decision making, including providing for <u>voluntary</u> biodiversity offsetting and compensation if certain criteria are met.</p> <p>Although the objectives of this chapter apply within the coastal environment, the specific management approach for biodiversity is contained in the CE – Coastal environment chapter. Given the biodiversity loss that has occurred in Otago historically, restoration or enhancement will play a part in achieving the objectives of this chapter and these activities are promoted.</p> <p><u>In addition to the threats from pests and weeds</u>, wilding conifers are a particular issue for biodiversity in Otago. Although plantation forestry is managed under the NESPF <u>a gap remains around carbon forestry</u>, <u>and</u> the NESPF allows plan rules to be more stringent if they recognise and provide for the protection of significant natural areas. The policies adopt this direction by requiring district and regional plans to prevent <u>inappropriate plantation or carbon</u> afforestation within significant natural areas and establish buffer zones where they are necessary to protect significant natural areas.</p> <p>The policies recognise that managing ecosystems and indigenous biodiversity requires <u>active management by landowners, and ...</u></p> |

| 00021 | Matakanui Gold Limited | 00021.017 | EIT – Energy, infrastructure and transport | EIT – New – Provision | Amend | <p>Amend as follows:</p> <p><u>EITM–MIN –PR2 – Principal reasons</u></p> <p><u>Mining in Otago is fundamental to the health and safety of communities, and their social and economic well – being and functioning. The nature of mining, particularly gold deposits means there are often both operational and functional constraints which dictate where mining can occur.</u></p> <p><u>The scale and type of activities involved in mining are such that adverse effects on the environment are likely and, at times, significant. Efforts are required to reduce effects, including rehabilitation, careful operation management during the life of the mine.</u></p> <p><u>There are instances however, when residual effects cannot be avoided, in which case effects should be remedied or mitigated and offsetting or compensation may be necessary if it meets any criteria set. Given the potential for adverse effects, it is important that local authorities monitor and enforce the standards set in plans and on resource consents and designations.</u></p> <p><u>The policies in this chapter give effect to the NPSFM and recognise mining has benefits for the wider Otago region and nationally. Implementation of the provisions will occur through the regional and district plan provisions.</u></p> |

| 00311 | Trustpower Limited                    | 00311.044 | EIT – Energy, infrastructure and transport | EIT – EN – PR1      | Amend | <p>Amend as follows:</p> <p>“Energy is a basic requirement of life in Otago. It enables communities to provide for their well – being, and health and safety, and is essential to the regional economy. Everyday life is significantly affected when energy supply is disrupted. Therefore, ensuring the security of energy supplies that meet demand is crucial. The ability of existing <del>energy</del> <u>renewable electricity</u> generation activities to continue operating is dependent on access to resources such as water in hydro lakes and the operator’s ability to maintain existing infrastructure.</p> <p>.....</p> <p>“Renewable electricity generation facilities <del>can</del> <u>may</u> cause <del>significant</del> adverse effects on the environment because of their functional need to locate in particular areas. These areas are where resources are available, for example water for hydro – electricity generation, but they may also contain other significant values such as <del>outstanding natural features or landscapes, significant indigenous vegetation or sites of significance to mana whenua values.</del> In some situations, it may not be possible to avoid, <u>remedy or mitigate significant</u> adverse effects on these significant values after considering alternative sites or design options. In these circumstances the effects should be remedied or mitigated, and consideration should be given to whether those <u>residual</u> effects that cannot be avoided are offset or compensated.”</p> |

|       | Glenorchy Limited                  |           |                         |                 |       | The policies in this chapter are designed to reduce the level of <i>natural hazard risk</i> within the region through sound preparation, investigation and planning. These provisions take a risk – based approach, taking into consideration the likelihood of the hazard and the vulnerability of people, communities, and the <i>environment</i> . <u>People and communities are resilient and determining the level of risk is dependent on societies tolerability of that risk so affected communities and stakeholders need to be involved in the determination of the different levels of risk.</u> The approach ensures consistent planning by applying the same framework irrespective of the type of <i>natural hazard</i> that may exist. It allows for the full range of <i>risk</i> mitigation measures (regulatory and non – regulatory) to be taken into account in determining the level of <i>risk</i> that exists at a particular locality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 00119 | Blackthorn Lodge Glenorchy Limited | 00119.024 | HAZ – Hazards and risks | HAZ – NH – PR1  | Amend | <p>Amend as follows:</p> <p>[...]</p> <p><del>The negative effects of natural hazards are generally best managed by avoiding development in areas that are known to be subject to natural hazards. However, the majority of the region is subject to some form of hazards risk, to a greater or lesser extent. While avoiding natural hazard risk may be the preferred option in many some cases, but mostly in other situations mitigating the effects of natural hazards to insignificant or tolerable levels of risk will be a feasible option to ensure the health, safety and well – being of the community. The changing nature of natural hazards risk due to climate change means that planning provisions need to be able to adapt to a future natural hazards environment.</del></p> <p><u>Consultation with the community is essential to understanding community tolerance. Accordingly, natural hazard risk assessments will be carried out in accordance with a table of risk level thresholds (risk table) to be generated at a district or community scale and prepared in meaningful consultation with affected communities and stakeholders It is also acknowledged that community tolerance is likely to be higher in relation to existing communities with lawfully established land uses and existing enabling zoning compared to new areas of development.</u></p> <p>Communities need consistent guidance on sea level rise, extreme weather events, and all other adverse <i>effects</i> of <i>climate change</i> if they are to appropriately <u>prepare for and respond to</u> <del>manage</del> those <i>effects</i>. ...</p> |

| 00101 | Toitū Te Whenua, Land Information New Zealand | 00101.053 | HCV – Historical and cultural values | HCV – WT – AER1    | Amend   | LINZ understands that in many cases Kāi Tahu and local hapu do not want information on cultural values to be published publicly, such as in regional and district plans. This is due to previous occurrences of destruction and vandalism of those sites and values. Subsequently, a more subtle approach may be required where information on those sites and values known are not made public.                                                                                                                                                                                                |
