

- I would have to say I disagree. Here we learned nothing from mistakes of the past.

- Our current landfill borders a stream and wetland. We have an old historic landfill under Tanga park which needs to be removed. Here we not learnt? ~~Site~~ Site: our landfill in a more sensible place.

Yes we will need ways to dispose of materials into the ground, ~~we have 2 landfills in Airedale currently.~~ As we work to a better system, the old ways of throwing everything out are changing. Why doesn't the thinking around the environment we buy our waste is not change, as well.

We have Brighton, located on the Otokia creek, this site sits directly above, the risk will never go away once built. Do our Council think they are doing anything safely?

- Thank you for the opportunity to have my say.
- Unfortunately I have not had the time to read the many emails that have come through so if I have missed any info
- Please disregard

My name is Pavn.

- I have a small farm down on the coast (Taver. Math Rd). Appay Skm is a direct line from Smooth Hill

- Brighton has become a completely different place from what it was 30 years ago when Smooth Hill was thought about. The fact no new studies have been done annoys me. Our current council likes to talk about how its a progressive thinking council, moving our city forward.

If you do decide to allow this proposal  
I would ask that it has attached  
Some fundamentally bullet proof conditions  
around Both Aviation Safety and  
Environmental Reaction if a leak should  
occur

I am not talking about a 6 monthly monitoring  
schedule rather a complete shutdown and  
Remedy before allowing continued operation

I would like our city to see the errors in  
its thinking and look for a more sustainable  
option where the effects on the environment are  
far less and the safety of its residents and  
visitors are never at risk while they travel  
by air.

Thank you.

The proposed site once again is unsuitable,  
I believe you will have heard experts all  
week say how the risks or options are there.  
Does that make it still a good idea?!

If by some sad chance a jet does suck  
in a bird or birds and crashes will these  
same experts be standing by. ~~do~~ I doubt  
it! It's easy to write out what should  
happen. Reality is always different. The risk  
is only going to be controlled if a ~~land~~  
land fill doesn't exist on that site

I want my son to grow up in this environment  
without fears of toxic waste leeching down into  
the water, the beach and our seas.
