

### Commissioners' Questions for Roger Simpson

Paragraph	Question
15	Do these costs relate to future infrastructure upgrades to replace existing open races with a piped delivery system?
18	Are border dyke or contour flood irrigation systems consistent with Objective B3 of the NPSFM to improve and maximise the efficient use of water?
16-22	When you refer to "reliability of the available water" are you referring to the percentile annual irrigation water demand (see for example Table 5 in Aqualinc 2017) or are you referring to the number of days over the irrigation season when the take is not 'on ban', or is not required to cease as a result of the minimum flow being breached in other words?
16 -22	Does this mean that if water is allocated now based on efficient spray irrigation (as per Aqualinc 2017), would the consent holders then be able to, of their own volition, irrigate smaller areas in the future using border dyke or flood irrigation?
